Support to the candidature of prof. Concetta Vazzana

IFOAM – Organics International is proud to support the candidature of prof. Concetta Vazzana to be nominated Emeritus by Italian Academic institution.

Concetta Vazzana stood out both for research and training activities in agroecology and organic farming as an Italian pioneer.

In 1982/83 she started teaching Agricultural Ecology at the University of Florence, the second Italian chair after prof. Caporali in 1980 at Tuscia University.

In early 90s, through international collaborations, instituted the first Long Term Experiment confronting conventional and organic agriculture in the Mediterranean area, at the experimental farm of Montepaldi (Florence, Tuscany), named MOLTE.

At early 2000s she coordinated the first Masters in Ecological Agriculture (Organic and Biodynamic) which had fifth editions, opening the door to new academy teaching and research approaches.

Among others, she has supported several initiatives in the enhancement of agrobiodiversity at regional, national and international level.

We hope that such a unique and distinctive academic route can be recognised as extremely important for the formation of future generations that today apply her concept and vision as a mainstream.

Sincerely yours,

Markus Arbenz
